Tell us about your latest piece of microwave technology.

A subject of current discussion in the microwave market is the use of RF Solid State cooking technology, which provides far better and more consistent power control, along with many other benefits. The cost of this technology is currently very high, but we will see it introduced to the market in time.

Manufacturers are always looking for new and innovative ways that microwave technology can be used. The Combination Microwave market is continuing to grow – with these clever machines offering the speed of microwave cooking, combined with the versatility of more conventional methods. Many also include pre-programmable menu facilities, such as the Maestrowave Combi Chef 7 which includes Menu Creator 2.0™, allowing users to set up to 99 different menu settings and deploy these to as many machines as required via SD card – ensuring total consistency. We are currently seeing rapid progress with Combination Microwave technology and expect to see imminent changes in this area – we are currently working with some major manufacturers in developing the next generation!

The use of barcodes with microwave cooking continues to be exclusively marketed and developed by iWave. The company are currently planning an addition to the range which will be designed to appeal to the wider catering market. Keep an eye on www.maestrowave.com for the latest news.

What factors should caterers consider before choosing their type of oven?

To choose the right kind of equipment, operators should look at their menu what tasks it should undertake. Consider if it is to be used mainly for the simple reheat and defrosting of foods - then a straight Commercial microwave will suffice. However, if you wish to reheat and cook food products then a convection oven or combination microwave oven is well advised. Items such as pastry will become soggy if reheated in an ordinary microwave whereas using a combination microwave the crisp, golden brown and conventional finished result will be achieved in microwave time! The Maestrowave Combi Chef 7 has many features to offer including the latest Menu Creator 2.0™ software package, which allows you to 'create your own menu' and programme up to 99 menus using any method of oven, microwave, grill or combination and with or without the turbo fan! This oven is the most flexible, efficient and easy to use oven yet and will help you produce the best results ever, in super quick time – it's really an oven that can do it all and produce consistent results time after time. Fitting into a skilled or non-skilled kitchen with complete ease, this piece of equipment is very easy to operate with sophisticated results being possible within both operations. The model sits on a counter and operates from a single 13 amp supply. We have produced a brand new video showing all the features and benefits of combi cooking using the latest and innovative Maestrowave Combi Chef 7. It is very important to choose the correct microwave oven wattage. You need to choose an oven with sufficient power, but just as importantly, do not over specify. If too low, you can be frustrated by delays, and if too high, it will be difficult to judge the timing of small portions. Whilst it is common for caterers to choose speed (the higher the output the faster

reheat times), it is also very important to understand that for some food products too much speed will destroy smaller portions of food or the delicate and sugary types of products.

How important is it to have easy to use oven equipment on site, especially for after hours room service menus and low skilled operators?

Models with manual controls are incredibly straight forward to use and offer an out of the box solution for unskilled kitchen staff. However, these models can sometimes lack the advanced features that have become available in recent years. A touchpad, programmable model may seem daunting at first glance, but provided this is set up correctly from the start it can actually be the most straight forward option. With the correct programme settings, a touchpad machine will ensure consistent results and help to prevent user error.

R H Hall are the Sole UK distributor for Sharp Professional Microwave Ovens.
